DRILLING

ABOUT US

SMA Drilling Limited is paving its way to success by demonstrating its leadership as a leading supplier of affordable, dependable and available water solutions to customers world wide. The company employs experienced and well trained experts from the borehole industry. The company lays great emphasis on providing the industry's best service delivery standards and services right from the techniques deployed in production to making water available.

HISTORY

SMA Drilling Limited is a company formed in India in 1976 to provide borehole drilling services all over India. The company is strong affiliations with GTP Drilling started in 1979 and GTP granites started in 1989. The year 2010 marked the beginning of the company's establishment at Ghana.

Ghana was chosen as the place to start the company's drilling operations in the West African Sub-region. The board of directors set up their office in Ghana and in April 2011, the company was formally incorporated as a Bore Hole Contractor. The company's main objective is providing practical solutions aimed at satisfying customers.

DRILLING

Drilling involves adopting specific methods of engineering that are technologically advanced in the industry. The company ensures use of improved and trusted underground technology to achieve sustainable water solutions in any environment. It offers a complete comprehensive portfolio that encompasses solutions and services aimed at meeting varying customers' needs and standards of excellence.

ACHIEVEMENTS

SMA Drilling limited has a highly efficient team and efficiency driven systems. These systems use reliable methods and techniques to provide solutions.

The company understands underground water system operations, identifies speculated changes and problems, and re-configures working methodologies to adapt to changes to achieve results that are based on optimization.

CATEGORIZATION

The company uses a wide range of testing and measurement services to assess the composition, properties, pressure and flow of underground water. Additionally underground water characterization techniques are used to develop solutions. Clients' needs are met by providing specific solutions that are better based on a clear understanding of expectations.

SOLUTIONS

The company offers a wide range of solutions and services for customers. Each specific requirement is designed in such a manner where it is challenged beyond its operating capacity to produce optimized and well fitted solutions. Additionally use of latest informative technology tools and expertise helps in providing the best solutions for underground water resources.

VISION

As a leader we envision a world where our underground water business can meet the needs of all people – right from metropolitans to the remotest offshore locations – by providing the most affordable and dependable solutions for available water.
